Original reviews

- This is a great course to open your mind up to how the world works and why things operate the way they do. I got an 'B' or maybe an 'A' from just reading the powerpoints. Reading the powerpoints is a must, however if you want a deeper understanding than I suggest you read the books. The teacher is too good and puts a lot of work into this course. The professor is overqualified. You can only do bad in this course if you let yourself to.
- This course is arguably one of the best, if not the best, online course you can take at the University of Akron. The class is very structured, and while that may sound difficult, it really assists in knowing what is going on and staying on task in the course. In terms of what it teaches you, it is invaluable. The concepts and understanding you will gain of the reason why things occur in the real world is incredible. This course has taught me everything from why someone might pick one brand of fruit over another, to why the loan interest rates change and everything that drives them. Not only is this course interesting and engaging, it is extremely useful. If you can do a little math and a lot of thinking about big concepts, I cannot recommend this course enough.
- This Economics course is extremely informative and a perfect way to encapsulate the sheer amount of knowledge about Economics. This course also does a great job of diving into the differences in macro and micro economics. I

highly recommend taking this purely online course. Dr. Myers gives great feedback to each student and tries to keep everyone on track.

- I would highly recommend this course, as I feel that I had a productive learning experience in the fully online format. I felt that the workload was manageable and that I will actually be able to use what I've learned in this course within my daily life.
- This class is a fairly easy and somewhat interesting course at times. I would recommend this professor for this class.
- This course is a well organized and beneficial class in regard to the study of economics. The class gives you all the means to succeed and teaches you many important points of economics. You will benefit from this course.
- This course was very helpful with gaining an understanding of economics and its functionality. This was a great introduction to thorough coverage of varying economic topics that even delve into macroeconomics. This course is beneficial for students who have an interest in learning economics or will have form of interaction with economics within their careers/professions (which is just about all careers and professions). The usage of conceptual, analytical, and graphical concepts offers helpful understandings to a variety of students of different notions.
- I think this course is a good class to take if you are interested in economics and if you like taking online courses. This online course has a really good schedule that breaks up the semester into very manageable pieces that are easy to understand with all the materials given to you in each module. You will learn a lot in this course as long as you are willing to put in the time and effort to complete it.
- You might just learn something about economics.
- This course can call for some studying and reading but you will definitely learn from this class.
- If you need an economics course as a pre-req or to really understand economics, this course is for you. It is difficult, and note-taking is difficult as the quizzes ask questions on so many details that you need to remember. However, the multiple attempts on the quizzes really helps with the quiz grades and understanding (though questions vary each attempt from the question pool). The learning assessments helps with retaining the information as you have to type some main principles you have learned, and the two papers (midterm and final) really help with application to the economics topics. I would recommend studying the powerpoints/making notes on the powerpoints, and using the videos provided for a better understanding of the information (though the quiz will not ask direct questions from the videos).

- This course has successfully prepared myself for an introduction of economic analysis. Things that I found helpful were the weekly due dates so that I could stay on track with assignments. Feedback was always available after the completion of a module so that I could grow my understanding of the topic. Some online classes can be difficult to understand the material but I can say that I successfully learned more than I would have expected regarding economics.
- When starting this course I thought the workload was a lot and I know a few girls grouped the class before any of the due dates because of the 13 topics in each module that we had to look at. But once you got through the first couple weeks it's not as bad as I originally thought!! This class was quite interesting and I would recommend it to other people for an econ credit.
- Great course! Makes you think deep about the economy and how to really is going. It also shows you how not to be deceived by the government or the news. It helps you do your own research and think more for yourself. A great course for people who even like a little bit of politics and facts. The true facts can never steer you wrong you just have to know where to find them.
- Just know the when the professor suggest studying for a certain amount of time over the week, he means it, and it is not as much as it may seem.
- This course gives a detailed layout on the aspects of economics ranging from microeconomics and macroeconomics. Many sources and video presentations are provided with the assigned modules that correlate with current situations in the world.
- This course will require definitely more effort than some other college classes. With that being said it will also be the most useful of most of your courses at this point. It will bring forward information that may not necessarily help with your major but will make you a well rounded person. It will make you more aware of what is going on around you and why and what will happen because of it and why. It truly is a tremendous course to enhance your knowledge of the world around you.
- This course is very challenging but very worth it, this will help you for the rest of your life and I would highly recommend it.
- good course like the way that it is set up taking the test multiple times and having to get a perfect score to pass otherwise u have to take all 3 attempts makes it so that u get as much information as possible learned from the course the videos are helpful throughout the course and are very informative about the topics that are on the quizzes
- If you have to take an economics course, take this one. While brief, the information given involves our system as a whole, and covers both micro and macro economics. It is an excellent course that also covers data and how it is

used, with sections on how to read uncommon graphs. This class is excellent at not only teaching you about our economy, but also teaches you how to look at it after the class and how to identify useful data.

- If you are looking into taking this course or you have to take this course due to your chosen major, make sure you set up your classwork in a way that you are efficient and will have ample time for this class. Look for Quizlets to study from or even make them yourself. I could've done better than what I did and you could too if you manage your time right and read more of the material than you think you would need to. It is an intensive course, do not look up the definition and put it to what this course could be. Be ready to work.
- I would recommend this course to anyone considering or interested in the basics of economics. I felt that this course interested me and inspired me to learn more. It had a good balance of reading and watching videos to learn, so it fits almost everyone's learning preferences. This course is organized and taught me so much about microeconomics and macroeconomics.
- It's a good online course. Everything is organized and you can email for help when you get stuck.
- This course is not a course you can just get an easy A in, however, this course will make you think more about what is currently happening in our economy. The farther in you go into the course the more you get interested in the information that is being taught. This course can be challenging but if you follow the dates provided to finish assignments, read through the articles and watch the videos, you'll do just fine. Overall this course is very enjoyable and would highly recommend!
- Intro to econ analysis is not a class to brush away. It is a valuable learning experience where you are tasked to see the big picture. You learn about past and present economic hardships and recoveries, and how to predict similar occurrences in the future. Be sure to put in the work though, it will pay off in the end.
- Very good class if you're willing to pick up a skill/knowledge that will actually help you in the real world compared to what some other classes offer. Some of the modules are very interesting and actually took me by surprise on how little not only I but many other people of my generation lacked knowledge of.

Would highly recommend taking the class if you want something that provides something interesting and a good amount of credit hours.

- Dear Prospective Introduction to Economic Analysis Student,

I would recommend taking this class over other economics classes. The online format is perfect for this course, as the subject matter can be

compartmentalized well into weekly modules. Additionally, it is fairly graded as long as you show you learned something.

In this course you will learn the basics of microeconomics and macroeconomics. It may not make sense at first, but as you progress through the course you will find some concepts just start to click and make sense. Regardless of your ideology or alignments, whether you care about money or not, you will gain something useful from this course.

- As a student coming into this course, I was nervous about what was going to come with the workload and how hard the content would be. But as I started and the weeks went by, the way this class was designed to flow helped with the workload of not only this class but many others taken throughout the semester. The week-by-week layout with everything needed to know for the quizzes and additional videos and PowerPoint helped with studying for each week's quizzes.
